# Preface

This book expands lecture notes by the authors for a course on *Introduction of Spectral Methods* taught in the past few years at Penn State University, Simon Fraser University, the Chinese University of Hong Kong, Hong Kong Baptist University, Purdue University and the Chinese Academy of Sciences. Our lecture notes were also used by Prof. Zhenhuan Teng in his graduate course at Peking University.

The overall emphasis of the present book is to present some basic spectral and high-order algorithms together with applications to some linear and nonlinear problems that one frequently encounters in practice. The algorithms in the book are presented in a *pseudocode* format or with MATLAB or FORTRAN codes that contain additional details beyond the mathematical formulas. The reader can easily write computer routines based on the pseudocodes in any standard computer language. We believe that the readers learn and understand numerical methods best by seeing how algorithms are developed from the mathematical theory and then writing and testing computer implementations of them. For those interested in the numerical analysis of the spectral methods, we have also provided self-contained error analysis for some basic spectral-Galerkin algorithms presented in the book. Our aim is to provide a sufficient background on the implementation and analysis of spectral and high-order methods so that the readers can approach the current research literature with the necessary tools and understanding.

We hope that this book will be useful for people studying spectral methods on their own. It may also serve as a textbook for advanced undergraduate/beginning graduate students. The only prerequisite for the present book is a standard course in Numerical Analysis.

This project has been supported by NSERC Canada, National Science Foundation, Research Grant Council of Hong Kong, and International Research Team of Complex System of the Chinese Academy of Sciences. In writing this book, we have received much help from our friends and students. In particular, we would like to thank Dr. Lilian Wang of Nanyang Technical University of Singapore for his many contributions throughout the book. We are grateful to the help provided by Zhongzhi Bai of the Chinese Academy of Sciences, Weizhu Bao of National University of Singapore, Raymond Chan of Chinese University of Hong Kong, Wai Son Don of Brown

University, Heping Ma of Shanghai University and Xuecheng Tai of Bergen University of Norway. Our gratitude also goes to Professor Hermann Brunner of Memorial University of Newfoundland, Dr. Zhengru Zhang of Beijing Normal University, and the following graduate students at Purdue, Qirong Fang, Yuen-Yick Kwan, Hua Lin, Xiaofeng Yang and Yanhong Zhao, who have read the entire manuscripts and provided many constructive suggestions. Last but not the least, we would like to thank our wives and children for their love and support.

# Contents

## Preface

<b>Chapter 1 Preliminaries</b> . . . . .	1
1.1 Some basic ideas of spectral methods . . . . .	2
1.2 Orthogonal polynomials . . . . .	6
1.3 Chebyshev and Legendre polynomials . . . . .	15
1.4 Jacobi polynomials and generalized Jacobi polynomials . . . . .	23
1.5 Fast Fourier transform . . . . .	27
1.6 Several popular time discretization methods . . . . .	38
1.7 Iterative methods and preconditioning . . . . .	48
1.8 Error estimates of polynomial approximations . . . . .	61
<b>Chapter 2 Spectral-Collocation Methods</b> . . . . .	68
2.1 Differentiation matrices for polynomial basis functions . . . . .	69
2.2 Differentiation matrices for Fourier collocation methods . . . . .	79
2.3 Eigenvalues of Chebyshev collocation operators . . . . .	84
2.4 Chebyshev collocation method for two-point BVPs . . . . .	91
2.5 Collocation method in the weak form and preconditioning . . . . .	99
<b>Chapter 3 Spectral-Galerkin Methods</b> . . . . .	105
3.1 General setup . . . . .	105
3.2 Legendre-Galerkin method . . . . .	109
3.3 Chebyshev-Galerkin method . . . . .	114
3.4 Chebyshev-Legendre Galerkin method . . . . .	118
3.5 Preconditioned iterative method . . . . .	121
3.6 Spectral-Galerkin methods for higher-order equations . . . . .	126
3.7 Error estimates . . . . .	131

<b>Chapter 4 Spectral Methods in Unbounded Domains . . . . .</b>	<b>143</b>
4.1 Hermite spectral methods . . . . .	144
4.2 Laguerre spectral methods . . . . .	158
4.3 Spectral methods using rational functions . . . . .	170
4.4 Error estimates in unbounded domains . . . . .	177
<b>Chapter 5 Some applications in one space dimension . . . . .</b>	<b>183</b>
5.1 Pseudospectral methods for boundary layer problems . . . . .	184
5.2 Pseudospectral methods for Fredholm integral equations . . . . .	190
5.3 Chebyshev spectral methods for parabolic equations . . . . .	196
5.4 Fourier spectral methods for the KdV equation . . . . .	204
5.5 Fourier method and filters . . . . .	214
5.6 Essentially non-oscillatory spectral schemes . . . . .	222
<b>Chapter 6 Spectral methods in Multi-dimensional Domains . . . . .</b>	<b>231</b>
6.1 Spectral-collocation methods in rectangular domains . . . . .	233
6.2 Spectral-Galerkin methods in rectangular domains . . . . .	237
6.3 Spectral-Galerkin methods in cylindrical domains . . . . .	243
6.4 A fast Poisson Solver using finite differences . . . . .	247
<b>Chapter 7 Some applications in multi-dimensions . . . . .</b>	<b>256</b>
7.1 Spectral methods for wave equations . . . . .	257
7.2 Laguerre-Hermite method for Schrödinger equations . . . . .	264
7.3 Spectral approximation of the Stokes equations . . . . .	276
7.4 Spectral-projection method for Navier-Stokes equations . . . . .	282
7.5 Axisymmetric flows in a cylinder . . . . .	288
<b>Appendix A Some online software . . . . .</b>	<b>299</b>
A.1 MATLAB Differentiation Matrix Suite . . . . .	300
A.2 PseudoPack . . . . .	308
<b>Bibliography. . . . .</b>	<b>313</b>
<b>Index . . . . .</b>	<b>323</b>
