Numerical Laplace Inversion With Applications To Evolution Problems

Hyoseop Lee Interdisciplinary Program in Computational Science & Technology, Seoul National University, Korea Jinwoo Lee Department of Mathematics, Kwangwoon University, Korea Dongwoo Sheen Department of Mathematics, Seoul National University, Korea sheen@snu.ac.kr

In this talk we present several Laplace inversion formula. Based on theses formula, fast numerical schems have been developed and used to solving many application problems. We apply and analyze those methods to solve some integro-differential equations and backward parabolic problems. We will also give some comparative remarks on other numerical schemes.
